

travay

Pronounced “try-vi”

Long Term Jobs Market for Developing Countries

What We Do

A citizen driven social
impact long term jobs
market

Problem

Everyday citizens of developing countries need access to “critical infrastructure” (i.e. education, sanitation, transportation, public services).

Insight

Governments of developing nations cannot provide consistent public services (aka “critical infrastructure,” such as sanitation, transportation, education and more).

...But everyday citizens are skilled to complete the work

Travay's Solution

- Citizens post good deeds (jobs) for others to fulfill regularly and improve the community at large
- The Travay token is what is earned from completing the good deeds
- Good deeds are jobs such as reading to a child or delivering water to those in need
- Jobs are paid out in Ether or stable coins
Experience from the deeds are curated into a resume for further economic mobility

How it Works

Alice posts a job that is directly tied to a social good (e.g. trash pick up and deposit)

Bob claims Alice's job, completes the work and provides proof the work was completed

The community benefits from the social good (i.e. consistent neighborhood garbage pick up); Alice found dedicated workers; and Bob now has earnings and a resume

Travay Colony's Revenue

**Worker earns ~98% of posted
job rate (excludes gas rate)**

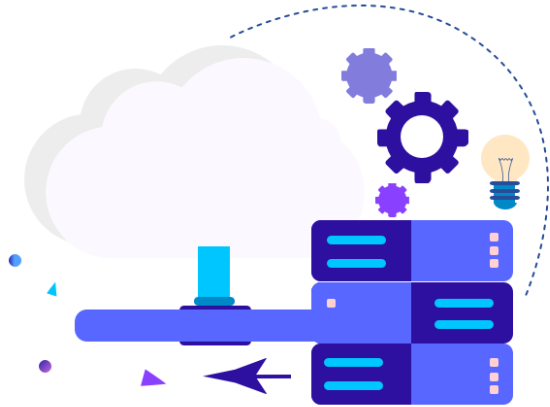

Each job posted gets
deducted 2% =>

1% to Colony
1% to Travay

Technology Stack

Colony + Travay Token + PWA

- Leverage's Colony's contracts. By having an individual's reputation tied to the Travay Token and workers earn in ether or stable coin
- Individuals interact with our Colony through our Progressive Web Application (PWA). This allows anyone with limited internet access to use our Colony on any device

Mission

Create economic
mobility

Provide critical
infrastructure to developing
nations

Onboard everyday
citizens to the
blockchain

Why Blockchain

Allows citizens to self-coordinate without the influence of corrupt or illicit non-state actors

Restricts uneven distribution of access to critical infrastructure by monopoly service providers

Some developing countries, such as Haiti, use the US dollar rather than their own currency

Verify that the existing good deeds were completed well and deduct reputation to those who defect
